

MAIN FEATURES:

- 850W White LED
- 3.8° to 50° linea zoom
- Ip65
- Framing System
- CMY Colour Mixing
- Ip65
- Linear CTO(2700K-7200K)

TECHNICAL SPECIFICATIONS:

POWER

- Source: 850W white LED
- Power consumption:1000W
- Voltage:AC100~240v,50/60Hz
- CT: 7200K
- Source life expectancy: 20.000h

FRAMING SYSTEM

- 4 fast and smooth framing shutters,
- Each shutter blade position and angle can be controlled individually
- Movement is fast & smooth, with adjustable speed
- Framing shutters can be precise motion with smooth movement
- Each shutter blade can block out light completely
- The framing module can be rotated at +/- 60°

COLORS

- 1 color wheels with 7 colors + white
- CMY Colour Mixing
- Linear CTO(2700K-7200K)
- Interchangeable ,indexable ,bidirectional rainbow effect

GOBO

- Rotating gobo wheels:
7 interchangeable gobo+ open ,indexable and gobo shaking effect
- Animation Wheel: special dynamic flame effect

DISPLAY

- 2.8 inch LCD display with English/Chinese menu
- Auto lock and display flip
- Pan/ Tilt reverse

FEATURES

- DMX channels: 34/36/56CH
- Zoom: 3.8°- 50° linear zoom
- Prism: 5 facet circular prism
- Motorized Focus
- Heavy Frost
- Dimming: 0-100% linear dimming
- 5%-100% electronic Iris
- Can rotate in both direction at variable speeds

MOVEMENT:

- Pan movement: 540° (16 bit)
- Tilt movement: 270° (16 bit)
- Advanced motion system: auto repositioning, fast, quiet and smooth

OTHER SPECIFICATION

- For Outdoor and Indoor installations
- Cooling: Active, silent operation
- Signal connection: 3 Pin DMX + Cat6
- Power connection: PowerconTRUE In/Out
- Optional ArtNET control
- RDM compatible
- Self-adjusting variable speed fans
- Excess-temperature protection
- Dimension: 418x300x655mm
- Weight: 27 KG

CERTIFICATIONS

- Certifications / approvals : CEE, UKCA, RCM

INTRODUCTION

Thank you for selecting the 850W LED BSWF

WARNING !

This product is not suitable for household use.

You now own a professional lighting unit that offers endless possibilities. Before installing, make sure that no damage was done to your luminaire during transport.

For your own safety and that of others, please read this instruction manual carefully before installing the unit.

Anyone involved in installing, operating or servicing the 850W LED BSWF must:

- Be a qualified, authorized professional
- Strictly follow the instructions in this user manual.

Please take the time to read this manual carefully and thoroughly before installing and operating the 850W LED BSWF . You should have a good knowledge of its operating conditions and all pertinent product information.

After you have become familiar with this manual, we recommend that you keep a copy for future use. All the information found in this manual is subject to change without notice.

SAFETY INSTRUCTIONS

Please read the safety instructions and warnings in this manual carefully before installing and operating the 850W LED BSWF.

WARNING!

Risk of electric shock.

Use caution when handling. This fixture requires high voltage, which can result in electric shock.

The fixture left our factory in perfect working condition. However, if you notice a defect, immediately contact your authorized 850W LED BSWF dealer before use. The manufacturer cannot be held responsible for damages caused by a failure to follow the safety, installation or assembly instructions contained herein, or by any modification made to the 850W LED BSWF.

Failure to observe the safety, installation or assembly instructions contained herein, or any modification made to the 850W LED BSWF will render the warranty null and void.

Check that the supply voltage does not exceed the maximum authorized limit. Check that your electrical installation complies with current standards.

In all cases, make sure that the power cables attached to your fixture have not been damaged due to cuts and splices or crushed in any way.

Handle these cables with extreme caution while they are connected to a power source.

Your 850W LED BSWF conforms to Class 1 safety standards. The unit must be grounded electrically. Make sure that the power source connected to your fixture is switched off before attempting any work on it.

Installation and connection to an electrical source must be performed by an authorized installer. Our factory declines all responsibility should this fixture be installed by an unqualified person.

Never disconnect your fixture by pulling on the power cable! First unlock the connector lock ring on the power cable until it is fully disengaged, and then gently pull on the connector to disconnect the cable.

Do not connect or disconnect the power cable of your fixture with wet hands.

At first use, your fixture may give off an odor. This is a normal occurrence that should dissipate after a few minutes of operation.

WARNING!

Do not connect or disconnect the power cable at your fixture if the cable is energized! This could cause arcing and damage your fixture, requiring repair.

Be careful to power off your fixture by removing the power plug from the source, before connecting or disconnecting the fixture.

Never look directly into the lamps if lit or stand directly in line with the fixture if close by.

Installation, removal or replacement of the unit must be performed with power off to prevent any risk of glare and eye injury.

WARNING!

The fixture quickly becomes very hot during operation.

To avoid risk of burn, never handle or adjust the fixture while it is energized and after it has been lit for more than 10 consecutive minutes. Some parts of the fixture can reach a high temperature, particularly the body/radiator. Turn off the fixture and wait for it to cool before handling.

CONDITIONS OF USE

Your 850W LED BSWF is a moving-head luminaire equipped with LED source intended for professional use (e.g., architectural, stage, television, theater, or museum lighting).

The 850W LED BSWF has an IP65 protection rating.

Condensation may form on your 850W LED BSWF in the following cases:

- Immediately after turning on the heating
- In places with fog or a high level of humidity
- When the luminaire is suddenly moved from a cold to a warm environment, or vice versa.

In such cases, you must wait until the luminaire readjusts to the ambient temperature of the room where it will be installed for operation.

Do not shake the 850W LED BSWF while installing or handling.

Do not pull the fixture by one of its cables to move it. Lift the fixture by its handles.

Choosing the appropriate place to install the fixture is essential. The following points should be observed:

- Do not expose it to a heat source.
- Do not install it near flammable materials.
- Be sure that dust or miscellaneous debris cannot clump around the body of the luminaire as this may interfere with its optimal cooling and proper operation.
- The 850W LED BSWF must be installed out of reach of the public and all persons not authorized to operate the luminaire.

We recommend a minimum distance of 5 m between the outside surface of the light and the illuminated object.

Due to the nature of its cooling principle, you should never prevent air from circulating around the body of the fixture. You must provide a minimum clearance around your fixture to allow for cooling.

The fixture can be installed in a ground pit or any other confined enclosure only under certain conditions. With this kind of installation, a system of forced ventilation should be used up to allow air to circulate freely around the fixture. The air must be constantly renewed because the luminaire cannot be operated in closed system. Failure to comply with these requirements may destroy or prematurely wear the fixture, and manufacturer cannot be held responsible. Please consult your 850W LED BSWF dealer for more information on this type of installation.

No load should be placed on the 850W LED BSWF. The fixture must not be installed in such a way as to allow a person, vehicle or any object to run over or park on it.

Never lay or drop any hard, heavy, or blunt, objects on the fixture. This includes items made of glass or porcelain (e.g., bottles, dishware, or glass beads). The fixture is made of materials such as plastic and extruded aluminum, making it resistant but not unbreakable. Objects made of hard materials such as steel or glass that fall on the unit may cause breakage of the plastic parts or the body. Our factory cannot be held responsible for the fixture's broken plastic parts or body, which are not covered under warranty.

The temperature of the room where the fixture is installed must never exceed 45°C ($T_a = 45^\circ\text{C}$).

The fixture requires a 110-240 VAC supply voltage. Check that your fixtures have been installed for an application that is compatible with this information.

Check that the brackets on which you hang or attach your fixture can sustain the weight of the fixture (27kg), taking into consideration all necessary safety factors.

Do not use your fixture before being familiar with these recommendations and do not allow unqualified personnel to handle the product.

To transport your 850W LED BSWF, we strongly recommend that you use the complete original packaging, including the dense protective foam inserts.

If your 850W LED BSWF is not being used for a long period, you should disconnect the fixture from the power source.

Never dispose of the in a rubbish bin. Ensure that it is recycled.
Please consult the current legislation in your country on recycling electronic equipment.

PRESENTATION AND FEATURES

850W LED BSWF is a waterproof moving head light (IP65 protection rating) using the latest generation of high-performance of LED-type lamps.

This 850W LED BSWF can be controlled remotely by an external DMX512 signal.

The 850W LED BSWF incorporates high power white LED source.

The 850W LED BSWF requires from 34 to 56 DMX channels to be controlled via an external command system that sends a DMX512 signal (see below for details).

To adjust the settings on the fixture (i.e., DMX address, DMX operating mode and other options), a Remote Device Management (RDM)-type DMX controller may be required. The DMX RDM protocol is a universal, widely used standard.

There are a multitude of RDM DMX controllers on the market from different manufacturers . It is worth noting that an RDM DMX controller is not required to change the settings on the fixture . A light console or any standard DMX-type controller is sufficient.

The 850W LED BSWF consists of a metal frame and plastic covers. The power connectors and DMX512 signal connectors are on the back of the fixture' s base.

TECHNICAL PARAMETER

POWER

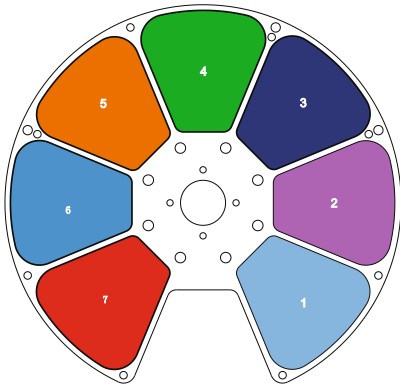

- Voltage: AC100~240V, 50/60Hz
- Source: 850W white LED
- Power consumption: 780W
- CT: 7200K
- Life: > 20,000H

MOVEMENT

- Pan movement: 540° (16 bit)
- Tilt movement: 270° (16 bit)
- Advanced motion system: auto repositioning, fast, quiet and smooth

COLORS

- **1 color wheels with 7 colors + white**
- Interchangeable, indexable, bidirectional rainbow effect
- CMY Colour Mixing
- Linear CTO (2700K-7200K)

GOBOS

- **1 Rotating gobo wheels:**
7 interchangeable gobo + open, indexable and gobo shaking effect
- **Animation Wheel:** special dynamic flame effect

FEATURES

- DMX channels: 36/34/56CH
- Prism: 5 facet circular prism
- Can rotate in both direction at variable speeds
- Motorized Focus
- Zoom: 3.8°- 50° linear zoom
- various strobe
- Heavy Frost
- Dimming: 0-100% linear dimming
- 5%-100% electronic Iris

FRAMING SYSTEM

- 4 fast and smooth framing shutters,
- Each shutter blade position and angle can be controlled individually
- Movement is fast & smooth, with adjustable speed
- Framing shutters can be precise motion with smooth movement
- Each shutter blade can block out light completely
- The framing module can be rotated at +/- 60°

DISPLAY

- 2.8 inch LCD display with English/Chinese menu
- Auto lock and display flip
- Pan/ Tilt reverse

SOFTWARE

- Remote reset DMX address, fixture reset
- Sound control by DMX

OTHER SPEC

- Input signal isolation
- Optional ArtNET control
- RDM compatible
- Self-adjusting variable speed fans
- Excess-temperature protection

DIMENSIONS AND WEIGHT

- Dimension:418x300x655mmmm
- Packing Dimension : 67X58X52.5cm
- Net Weight: 27 KG
- Gross Weight: 31KG

Beam Angle

Display: To show the various menus and the selected function.

Button:

Enter	To perform the desired functions
DOWN	To go to move down in the menu
MENU	To enter into move backward or leave the menu
UP	To go backward or move up in the menu

ETHERNET: Transfers fixture' s information to a main controller.

DMX input: For DMX 512 operation, use 3/5-pin XLR plug cable to link the units together

DMX output: For DMX 512 operation, use 3/5-pin XLR plug cable to link the units together

How To Set The Unit

Main Function

Turn on the unit, press the MENU button into menu mode, and press the UP/DOWN button until the required function is shown on the monitor, select the function by the ENTER button, Use the UP/DOWN button to choose the SUB-Menu , press the ENTER button to store and automatically return to the last menu. Press the MENU button or let the unit idle one minute to exit menu mode.

The main functions are shown below:

DMX512 CONNECTION

Connect the DMX input (XLR connector) cable of the luminaire to the DMX output (female XLR connector) of your controller. You can connect multiple fixtures to this same DMX line in a daisy chain. The DMX cable must be a shielded twisted pair that is equipped with male and female XLR connectors.

USING DMX VIA ART-NET

To control the fixture via ArtNet, the fixtures must be interconnected with RJ45 cable. Be careful to set all necessary information regarding the ART-NET configuration with universe being used and specify in the menu that the fixture is being controlled through ART-NET (see OPTION DETAILS in the « OPTIONS » menu).

THE 850W LED BSWF DMX ADDRESS SETTING

All 850W LED BSWF must have a DMX start address correctly set when using a DMX signal to control them. The DMX start address is the channel from which the 850W LED BSWF “listens” to the digital control information sent by the DMX controller.

The start address must conform to the one set on the DMX controller to control the fixture. This address is the DMX value that appears on the fixture’s display. You can set the same address for all the fixtures, or some of them, but you can also set a different address for each fixture, as needed. If you do set the same address for all the fixtures, they will all “listen” from the DMX channel you have set. The instructions sent by the DMX controller will affect all fixtures at the same time. If you set a different address per fixture, the DMX controller can control each independently. If, for instance, the fixtures are preset in 00-channel DMX mode (required for full control), you will need to adjust the DMX address for the luminaires as follows: The first unit with DMX address 001, the second with DMX address 037(36 + 1), the third with DMX address 073 (037+36), etc.

DMX 512 Configuration

Please refer to below configurations to control the fixtures

Attentions:

1. The unit will maintain the last condition until reset if you cut-off the DMX signal.
2. For the channel Function, keep the value for about 5 seconds, then the corresponding function will take into effect.

ERROR MESSAGES

When you turn on the 350W LED hybrid fixture, it will first perform an automatic reset. The display may show "Err channel is XX" indicating there is a problem with one or more of the channels.

"XX" represents channel 1, 2, 3, 4, 5 or 6, which contain the testing sensor for positioning. For example, the message, "Err channel is Pan movement" , indicates an error in channel 1. If there is an error on channel 1 and channel 3 at the same time, the following error message may appear: "Err channel is Pan movement" , "Err channel is Tilt movement" . The system will flash twice, and the fixture will generate a second reset. If the error message persists after more than two resets, the channels showing errors will not work properly but the other channels will function normally.

Please contact your authorized dealer or manufacturer for service and do not attempt to repair the luminaire yourself.

PAN- movement Er

(PAN-yoke movement error): This message will appear after the reset if the yoke' s magnetic-indexing circuit malfunctions (failed sensor or magnet missing) or the stepping-motor is defective (also caused by its driving IC on the main PCB). The PAN- movement does not return to the default position after the reset.

TILT- movement Er

(TILT- head movement error) This message will appear after the reset of the fixture if the head' s magnetic-indexing circuit malfunctions ((Optical Sensor or Magnetic Sensor fails)) or the stepper motor is defective (or its driving IC on the main PCB).The TILT-movement is not located in the default position after the reset.

Zoom Er

(Zoom error) This message will appear after the reset of the fixture if the head' s magnetic-indexing circuit malfunctions (Optical Sensor or Magnetic Sensor fails) or the stepper motor is defective (or its driving IC on the main PCB). . The Zoom -movement is not located in the default position after the reset.

Focus Er

(Focuswheel error) This message will appear after the reset of the fixture if the head' s magnetic-indexing circuit malfunctions (Optical Sensor or Magnetic Sensor fails) or the stepper motor is defective (or its driving IC on the main PCB).The Focus -movement is not located in the default position after the reset.

Color wheel Er

(Color wheel- error) This message will appear after the reset of the fixture if the head' s magnetic-indexing circuit malfunctions (sensor failed or magnet missing) or the stepper motor is defective (or its driving IC on the main PCB).The Color - movement is not located in the default position after the reset.

Rot_Gobo wheel Er

(Rot_Gobo1wheel - error) This message will appear after the reset of the fixture if the head's magnetic-indexing circuit malfunctions (sensor failed or magnet missing) or the stepper motor is defective (or its driving IC on the main PCB). The Rot_Gobo1 - movement is not located in the default position after the reset.

Fix_Gobo wheel Er

(Fix_Gobowheel - error) This message will appear after the reset of the fixture if the head's magnetic-indexing circuit malfunctions (sensor failed or magnet missing) or the stepper motor is defective (or its driving IC on the main PCB). The Fix_Gobo - movement is not located in the default position after the reset.

Prism Er

(Prism error) This message will appear after the reset of the fixture if the head's magnetic-indexing circuit malfunctions (sensor failed or magnet missing) or the stepper motor is defective (or its driving IC on the main PCB). The Prism_5 - movement is not located in the default position after the reset.

Frost Er

(Frost - error) This message will appear after the reset of the fixture if the head's magnetic-indexing circuit malfunctions (sensor failed or magnet missing) or the stepper motor is defective (or its driving IC on the main PCB). The Frost 1 - movement is not located in the default position after the reset.

CLEANING AND MAINTENANCE

The following points have to be considered during inspection:

- 1) All screws for installing the devices or parts of the device have to be tightly connected and must not be corroded.
- 2) There must not be any deformations to the housing , lenses, rigging and installation points (ceiling, suspension, trussing).
- 3) Motorized parts must not show any signs of wear and must move smoothly without issue.
- 4) The power supply cables must not show any damage, material fatigue or sediment.

Further instructions depending on the installation location and usage have to be adhered to by a qualified installer and any safety concerns have to be removed.

MISTERY IP65
